

## Heather Honey Loosener

Art. No. 1073

**For efficient loosening of your heather honey. An all stainless steel construction.**

The honeyloosener is now equipped with two scratching plates in front of the plastic needles to scrape off possible wax remnant every time the needles are pulled back and the sheet is no longer pulled in. Beside this, the feeding mechanism has been improved pulling in the sheets exactly now.

The function is the same as before: you place the frames between the two needle plates and operate the machine with the handle. The plates are pressed together and the needles penetrate into the honey cells. Every time the plates are pulled back, the frames move forward a little, so that every honey cell is prepared. Every needle is supported by a small spring to prevent the needle from breaking, if it hits a cell with pollen or the wooden frame.

### Technical Data

Includes:	Legs and wheels (delivered unassembled)
Frame size: for stroth	Max. 442x270 mm comb size (suitable for Dadant Blatt, Modified Dadant, Lang and all smaller frames). Easily adjustable to different frame sizes.
Materials:	Stainless steel
Operation:	Manual operation
Capacity:	About 2-3 frames per minute
Weight:	Approx. 30 kg
Dimensions:	66x66x118cm (assembled)
Item#:	107331
Tarif Code:	8436 9900
Packing:	1 pcs./box
