

Automatic Heather honey loosner

exclusive

Technical Data

Includes:	Legs and Wheels (delivered unassembled)
Frame size:	Max. 442x270 mm comb size (suitable for Dadant Blatt, Modified Dadant, Langstroth and all smaller frames) Easily adjustable to different frame sizes
Material:	Stainless steel
Operation:	Automatic
Power:	230V/50Hz
Power consumption:	40W
Capacity:	About 4-5 frames per minute
Weight:	Approx. 59 kg
Dimensions:	80 x 66 x 118 (assembled)
Item #:	107334
Customs code:	8436 9900
Packing:	1 pcs./box

For efficient loosening of your heather honey. An all stainless steel construction.

The well-engineered and highly accurate Oswald Hain honey loosener. It is capable of loosening 4-5 frames a minute with impressive precision and with minimal damage to the comb.

The honey loosener is now equipped with two scratching plates in front of the plastic needles to scrape off possible wax remnant every time the needles are pulled back and the sheet is no longer pulled in. Beside this, the feeding mechanism has been improved pulling in the sheets exactly now.

The function is the same as before: Place the frame between the two needle boards and start the machine by pressing one time at the button. The plates are pressed together and the needles penetrate into the honey cells. Every time the plates are pulled back, the frames move forward a little, so that every honey cell is prepared. Every needle is supported by a small spring to prevent the needle from breaking, if it hits a cell with pollen or the wooden frame.

Green button = Start
Red button = Stop
Rotary button = 3, 5 or 7 cyklus
